Users can create accounts

Users are able to create an account, this is the first thing a user must do before accessing the site. Users can access the create an account by clicking on the “Create account” link at the bottom of the login page. Below is an example of a user logging in.

The screenshot shows a 'Create an account' form on a purple gradient background. The form has three input fields: 'Username' with the value 'John Gonzaga', 'Email Address' with the value 'Gonzaga@gmail.com', and 'Password' with four dots. Below the fields is a purple 'REGISTER' button. At the bottom, there is a link that says 'Have an account? Sign in'.

Users can Log in

Users are able to create an account and log in. After creating an account a user must remember the password they choose, and use it to log into the chat forum.

Log into Meowit

Email Address

Gonzaga@gmail.com

Password

....

SIGN IN

Don't have an account? [Create one](#)

If the login is successful it will display and alert telling the user their account was created.

localhost:3000 says
Login successfully

OK

Users are able to create posts

This meets two functional requirements; I have grouped their documentation, as they are very similar.

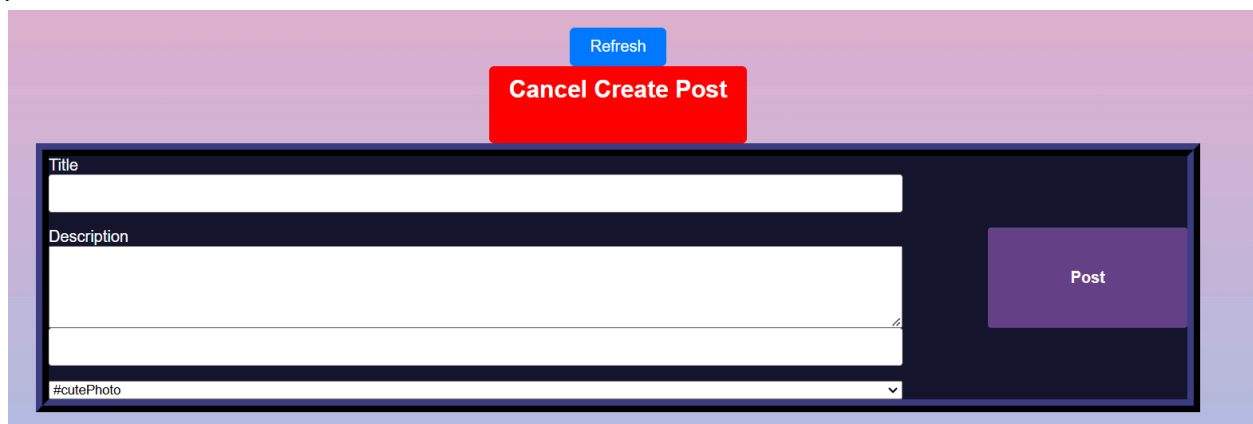

- Users must be able to create posts with a maximum of 1000 characters. (font + back)
- Users must be able to apply a title to their post with a maximum of 50 Characters(front + back)

At the moment users are able to create posts, and have those posts displayed through the “refresh” button, later I will make the refresh automatic. Users are not able to post images yet, because I found that the process for that was a lot more difficult than I first imagined. However users can make posts, and those posts will display the posting time, and the username.

Upon login the user will be shown a screen with some other users posts, and a button to create a post.

To create a post, the user must click the “Create Post!” button. This opens up a form to make a post.

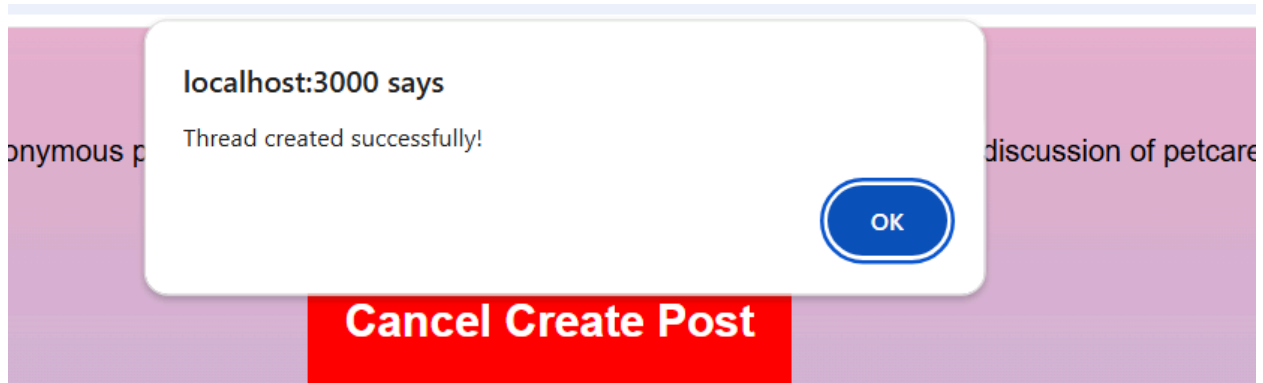

The user can create a post title with a maximum of 50 chars, and a description with a max of 1,000 chars. A user can then create the post via clicking the “post button”.

For example, a user could type.

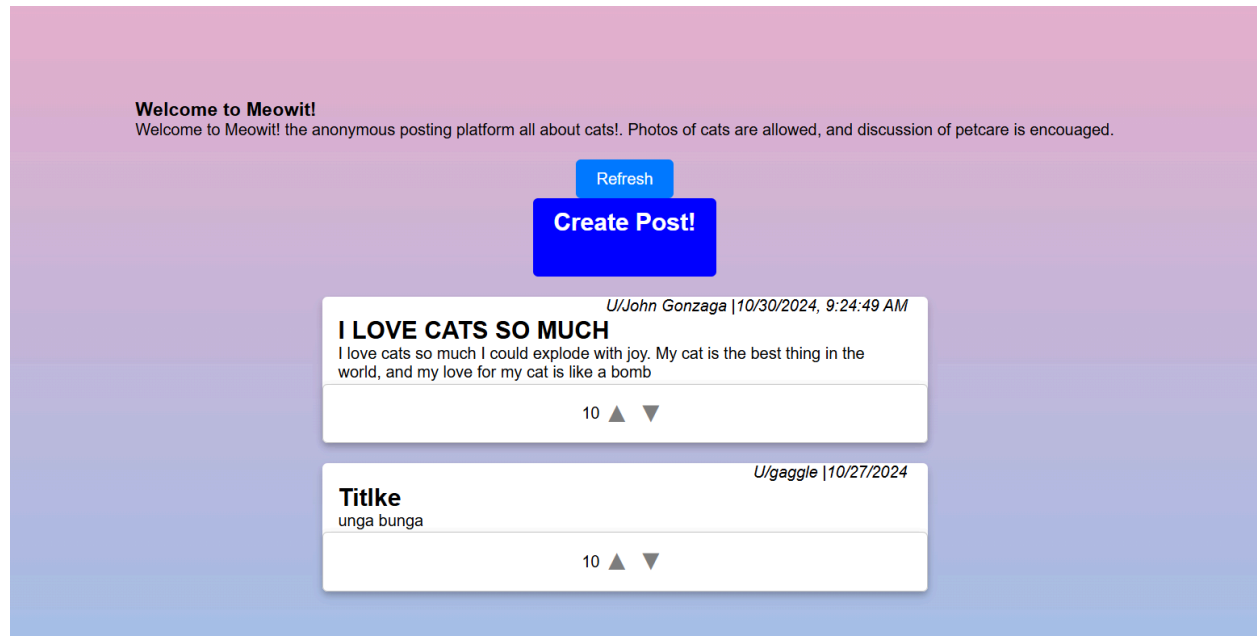

A screenshot of a web form for creating a post. At the top, there is a blue "Refresh" button and a red "Cancel Create Post" button. The form itself is a dark blue box with a white border. It contains a "Title" field with the text "I LOVE CATS SO MUCH", a "Description" field with the text "I love cats so much I could explode with joy. My cat is the best thing in the world, and my love for my cat is like a bomb", and a "#cutePhoto" field with a dropdown arrow. To the right of the form is a purple "Post" button.

Clicking post will cause a alert

If the user clicks “Refresh”, the site will refresh with the server showing the user the post they just made.

As you can see in the above example, a new post was created with the specified text, and with the specified text. The post also displays the user that created the post, as well as the time and date of the post.

Users must be able to maintain and increase their current karma scores

This was implemented via the use of a “upvote / downvote” system. Users can increase or decrease the karma score of others via use of an upvote / downvote system. Each user can also upvote or downvote their own posts.

Users click on the upvote arrow to increase karma, and downvote to decrease.

Welcome to Meowit!

Welcome to Meowit! the anonymous posting platform all about cats!. Photos of cats are allowed, and discussion of petcare is encouraged.
